

How do you make your
storage unhackable?

With all the data breaches in the news,
offline data storage continues to expand.

Add our hard drive shelving to your “air
gap” hack proof storage equation.

Currently in development

New shelf configurations for work station
access.

New capacity to scrub your data and migrate
your data automatically integrated with the
shelving units. Minimal human intervention
needed.

Coming
soon!

A-360

Our new A-360 features
two D-180s. Strong, sturdy,
reduced footprint. When
you need to store quantities
of accessible drives.

As the pioneer of the tapeless
workflow in the world of media and
information migration, we saw a
growing and compelling need on the
horizon. Many industries, including
digital imaging, were capturing and
storing data to external [SATA] hard
drives, but we couldn't identify an
effective and cost effective storage
solution and drives were stacking up!

Made in USA

So we designed and built our own! Now our shelves are used by law enforcement, IT, media, science researchers, state highway data collectors, to name a few.

-  Cost effective modular shelving developed and handmade in the USA by BonoLabs
-  Basic pine shelving wood material with birch plywood inner shelves and back
-  Sturdy – non-conductive - nothing fancy but very functional

Excellent for IT security, law enforcement, record management, and media professionals. All models feature tilted inner shelving to help hold the drives in place.

Close-up

All inserts are uniform in size. Constructed of pine shelving wood material with birch plywood inner shelves and back.

Just add drives...

Hand-crafted hard drive shelves for organizing and protecting multiple external hard drives and XDCAM discs. Capacity ranges from 6 hard drives to 360.

D-6

The D-6 holds up to six hard drives. Portable. \$75

D-21

D-21 "mini" modular unit. Great for current project drives. \$125

D-75

These units may be stacked, set beside each other. The base model D-75 will house 75 each 3.5 inch drives very nicely. \$265

stack unit

These sturdy stable units are designed to stay upright. They hold two of our D-75 shelf modules. You can store up to 150 drives. They stand 66 inches tall. D-75 units not included. \$165

D-180

This unit empty weighs approximately 45 pounds. Fully loaded with 4 TB drives, it will weigh 500+ pounds. Please be mindful of its placement. \$618

C-80

C-80 Carousel model. Perfect for sharing drives between stations and to take advantage of smaller spaces (29-inch diameter "footprint"). \$325

drive boxes

Our sturdy hard drive boxes are made of 100% recycled paper products. By nature non-conductive electronically. \$1.35 each/minimum of 10

Shipping and handling are extra on all shelving. See website for details. When ordering multiple units, ask ahead for shipping costs. We can reduce your fees through "bundling" of items.
